

Logic Training – Beginner

Week February 24, 2017

Instructions:

Mazes are classic logic puzzles and these Color Mazes have a tricky twist! Your task is to move from the Start (S) to the Finish (F) by passing through an equal number of squares of each non-white color (white squares don't count but you can still pass through them). For example, if you pass through two red squares, you must also pass through exactly two yellow and exactly two blue squares - remember white squares don't follow this rule. For each move, you may only draw a path that moves horizontally or vertically. Each puzzle has only one, unique solution. Good luck in the maze!
